EXHIBIT

ISOLATION AND TIMING SAMPLES

This section illustrates the quality consistency of The Supra Vantage® alarms. We took seven (7) samples of other alarm sets. Below you will find a description on how each sample was taken. In exhibit attachment you will find results from each sample.

Sample set (A): First, we started with the “Alarm Sample Inventory”. Second, we selected 10 of the better alert symbols from the Alarm Sample Inventory. Next, we pulled the raw output sheets that generated each of the 10 selected symbols. We then found each symbol’s corresponding place on its respective raw output sheet. Next, we took each of the 10 raw output sheets and counted two eligible alarms above and two eligible alarms below each 10 symbols. In each case we took the next entry. This is what was used to generate a new random sample set of 20 observations.

Sample set (B): we random sampled 20 alarms from raw output sheets dating between 2/15/2005 - 8/02/2007.

Sample sets (C-G): we random sampled entire out put sheets form the following arbitrary dates: 5/5/06, 6/7/06, 10/9/06, 8/13/07, and 8/17/05. This procedure resulted in five separate sample sets from these five output sheets.

See attachment for sample test results. These random sample exercises are continuously performed in an effort to demonstrate two concepts. First, the output of Supra Vantage® has the capability to yield a high degree of quality and quantity of alarms. Second, The Supra Vantage® is accurately and continuously answering the first two questions needed for superiority: Which stock to trade? When to trade?

Glossary

Successful Alarm: Alarm that The Supra Vantage® generates in such a way that there is enough time to trade (long or short) to satisfy the definition of a successful trade as outlined in the main section of this document.

Border Line Alarm: Alarm that was generated by The Supra Vantage® that had some profitability but not enough to satisfy our definition of success.

False Alarm: Alarm that The Supra Vantage® throws off that turns out to have no real profit opportunity during the designated window of time as out lined in the definition of a successful trade.
